## PROJECTS

### GoPro KARMA Drone - BuckHorn (03/2016 - 09/2016)

- Worked in Localization Module in Seven Languages.
- Adding new assets as per customer CR (Change Request).
- Sanity Testing
- Providing Hooks for simulation of real time scenarios as flying Drones in India is restricted.
- Language used: Java (Android)

### Turner - Digital Ads (09/2016 - 12/2016)

- Worked on a POC of creating a Digital Ad Scheduler, the website is used to display ads on CNN.com and can be used for other websites also. With this we can schedule the time interval, number of times of a particular static or dynamic ad.
- Worked on Billing Module which calculates overall bill generated based on number of clicks and impressions on a particular Ad.
- Implemented the feature of Geo Targeting through which Country of a user is determined using ISP and according to that country/area Ad is displayed.
- Language used: Java, JSP

### Nominum VPN App Development (12/2016 - 12/2017)

- Creation of virtual sockets and tunnel interfaces in C++
- Creating Authentication Packet and forwarding network packets.
- Assigning IP addresses to the interfaces and maintaining free and busy pool of IPv4 and IPv6 Addresses.
- Reading the configuration file and initializing the server with the data.
- Authenticating client app using mobile numbers in whitelists.
- Addition of IPv6 support.
- Creation of AWS linux machines with dual stack network and common dns name.
- Creation of routing rules for proper internet connectivity

### Cisco Auto-Attendant (12/2017 - 03/2018)

- The software interacts with the caller and allows the caller to search for and select the extension of the party (in the organization) that the caller is trying to reach and makes the calls experience interactive without the need of receptionist.
